SUMMARY

Results-Flutter Developer with 1.3+ years of experience in mobile application development, specializing in building high-performance, scalable cross-platform apps. Proficient in Dart, modern state management techniques (Bloc, Provider, GetX), and robust API integration. Adept at translating business requirements into clean, modular, and maintainable code to deliver seamless user experiences.

WORK EXPERIENCE

OfferPlant Technology Private Limited, Chhapra , Bihar

Jan 2025 - April 2026

Flutter Developer

- Designed, developed, and maintained robust cross-platform mobile applications using Flutter and Dart.
- Integrated secure RESTful APIs and handled complex JSON payloads to ensure efficient frontend-backend communication.
- Implemented predictable state management workflows (Bloc/Provider) to handle asynchronous data and user interactions smoothly.
- Managed source code using GitFlow, participating in code reviews to ensure clean, reusable, and optimized code architecture.

PROJECTS

- **Connectify** - Real-Time Chat & Video Calling Platform | [GitHub Repo](#)
Tech :- Flutter, Dart , REST APIs, MySQL, Provider
 - Users can send instant text messages to each other and start live video calls.
 - It uses **WebRTC** technology for video calling, which allows high-quality, lag-free video streaming directly between two phones. For the instant messaging part, it uses **Socket.io** to make sure text messages deliver in real-time instantly.
- **VibeMesh** : Social Media Mobile Application | [GitHub Repo](#)
Tech :- Flutter, Dart , REST APIs, MySQL, Provider , GitHub Actions (CI/CD)
 - Users can share photos and posts, view other users' profiles, and follow or unfollow friends. It also includes options to like and comment on posts.
 - The frontend is made with **Flutter** and the backend API is written in **Node.js/Express**. Most importantly, implemented an automated **CI/CD pipeline** using **GitHub Actions and Render**. Automated build, testing, and deployment cycles to Render, minimizing manual deployment overhead and ensuring rapid release cycles.
- **ShopSathi** : E-Commerce Mobile Application
Tech :- Flutter, Dart , REST APIs, MySQL, Razorpay, Provider
 - Users can browse through a catalog of different products, add their favorite items to a shopping cart, and place an order by making a payment.
 - Secured end-to-end user transactions by seamlessly embedding the Razorpay Payment Gateway API supporting UPI, cards, and digital wallets. All the product and user data is stored safely in a **MySQL** database on the backend.

- **ZaykaZone** : Food Delivery Mobile Application | GitHub Repo

Tech :- Flutter, Dart , REST APIs, MySQL, Razorpay, Provider

- It displays a list of nearby restaurants and their food menus. Users can add multiple dishes to their cart, enter their delivery address, and order food.
- Managing the shopping cart—like adding items, updating totals, and clearing the cart—is done smoothly using **Provider** state management. Just like the e-commerce app, it uses **Razorpay** to process secure online food payments.

EDUCATION

Bachelor of Arts (BA) - JP University, Chapra ,Bihar

July 2020 - Aug 2023

Higher Secondary (12th) - Bihar School Examination Board (BSEB)

July 2016 - Aug 2018

TECHNICAL SKILLS

- **Mobile Development** : Flutter
- **Languages** : Dart, Kotlin, JavaScript
- **Backend & Services** : Firebase (Auth, Firestore, FCM), REST APIs, Socket.io, MySQL, Nodejs & Expressjs, WebRTC
- **State Management** : Provider, Getx, BLoC
- **Tools & APIs** : Git, GitHub, GitHub Actions, Render (Webhooks), Google Maps API, Razorpay
